FOR IMMEDIATE RELEASE

INDEX ENGINES STREAMLINES E-DISCOVERY ACROSS ALL STORED DATA

New platform delivers fast collection and culling for all ESI enabling significant cost control

Holmdel, NJ — Feb. 2, 2009 — Index Engines, providers of the fastest enterprise discovery technology on the market, today announced the ability to index and extract electronic stored information (ESI) across offline tape, network storage, file shares, forensic images and hard drives via one platform and user interface. This unique functionality allows users one point of entry into their stored data for collection and initial culling to manage costs early in the eDiscovery process. With Index Engines enterprises can now dedupe, search and extract through one unified platform, reducing redundancy, time and cost associated with using multiple tools to access only segments of their ESI.

"Index Engines has taken our unique capabilities to access backup data on tape, and applied the same unmatched speed and scalability to other storage containers," said Tim Williams, CEO of Index Engines. "Our new platform changes the way companies will approach eDiscovery. Instead of collecting data in various locations with a suite of different applications, Index Engines now allows electronic discovery to be powered by one solution. eDiscovery via one interface translates into significant savings of both time and money."

Index Engines' new platform builds a comprehensive index of all stored data. This index allows users to dedupe, search and extract relevant data at unmatched speeds of up to 100MB/sec, 360 GB/hr. By providing one view, this solution eliminates the time historically spent on merging the results of separate discovery efforts into one review platform. Since duplicate data can now be filtered across containers during the initial collection, eDiscovery is now a much faster and more cost effective process. By loading only the unique and pertinent information into an EDRM compliant case management platform, Index Engines reduces the amount spent on processing with legal review tools.

Visit Index Engines at LegalTech NY, Feb 2-4, 2009 in booth 2611/2613 to see a live demo of this new unified eDiscovery platform. Index Engines is now taking orders for the unified platform, delivery scheduled within eight weeks. Price and availability are dependant on configuration.

About Index Engines

Founded in 2003, Index Engines is the leader in enterprise discovery solutions. Our mission is to organize enterprise data assets, making them immediately accessible, searchable and easy to manage. Businesses today face a significant challenge organizing their files and email to ensure timely and cost efficient access, while also maintaining compliance to regulations governing electronic data. Companies rely on Index Engines solutions for comprehensive insight into their data to simplify information discovery, classification and management.

The patent-pending Index Engines discovery platform is the only solution on the market to offer a complete view of electronic data assets. Online data is indexed in-stream at wire speed in native enterprise storage protocols, enabling high-speed, efficient indexing of proprietary backup and transfer formats. Index Engines' unique approach to offline records scans backup tapes, indexes the contents and extracts relevant data, eliminating the time-consuming restoration process. Index Engines provides the only comprehensive discovery platform across both online and offline data, saving time and money when managing enterprise information.
